The building Location: Osaka city, Sumiyoshi-Ward, Shimizugaoka neighborhood,

Residence: Green Court - (Suite 604):

GHT Japan together with Kameda Denki and its affiliates are proud to report on the completion of indoor heating installation project.

The following project demonstrate yet again a renovated “Tatami” room with parquet flooring while integrating AHT’s underfloor heating mats customized and adjusted into the Japanese traditional flooring construction method also known as “Compane” as depicted below.

AHT’s standard heating mats sizes were adjusted at AHT’s factory to meet the Japanese flooring standard by implementing the following concept:

and were installed in apartment building located in Osaka city where winter’s weather is getting really cold. The following selection of photos exhibit a perfectly done neat installation in compliance with Japanese construction Standard formfactors “shakkanhō” (尺貫法).

Preparation of underlayer insulation

Laying out the customized heating mats

Wiring the cold leads

Dispensing adhesive substance for top plywood cover

Mounting Top Cover

Top cover mounting completion

Applied parquet flooring
